## Electromagnetic flow meter for flow measurement AE-LDG-DNXX flow meter

AE electromagnetic flow meter does not contain any moving parts, rotating gears or turbines, or bearings. Instead, it relies on two electrodes to measure the density of the induced magnetic field that results from an electrically conductive fluid, such as water, flowing through a pipe. So there is no susceptibility to bearing wear or other mechanical wear-and-tear issues.

As for the electrodes and the liner used in electromagnetic flow meter, these components can be fabricated from a variety of materials to make the mag meter compatible with virtually various electrically conductive fluid, including aggressive acids.

The only limitation of the electromagnetic flow meter is that the measured fluid media must be electrically conductive ( $> 5\mu\text{S}/\text{cm}$ ). Non-conductive fluids, such as oil and other petroleum-based fluids, cannot be measured with mag meter technology.

### Application

- Sewage treatment
- printing and dyeing
- Chemical industry
- Environmental protection
- metallurgy
- medicine
- papermaking
- Tap water supply

### Features

#### PROS

- 0.5%F.S measuring accuracy
- RS485 mod-bus communication 4-20mA output
- It can measure the flow of fluid in the forward and reverse directions.
- Unaffected by the temperature, pressure, density of the liquid.
- There is no pressure loss.
- Readings that are unaffected by changes in density or viscosity.

#### CONS

- Cannot detect gases and liquids without electrical conductivity.

**Electromagnetic flow meter**

# AE ELECTROMAGNETIC FLOW METER

## Principle

The measurement principle of magnetic flowmeters can be described as follows: when the liquid goes through the pipe at the flow rate of  $v$  with a diameter  $D$ , within which a magnetic flux density of  $B$  is created by an exciting coil, the following electromotive  $E$  is generated in proportion to flow speed  $v$ :

$$E = K \times B \times V \times D$$

Where:

- $E$ —Induced electromotive force
- $K$ —Meter constant
- $B$ —Magnetic induction density
- $V$ —Average flow speed in cross-section of measuring tube
- $D$ —Inner diameter of measuring tube

The induced voltage signal is detected by two electrodes and transmitted to the converter via a cable. After a series of analog and digital signal processing, the accumulated flow and real-time flow are displayed on the display of the converter.

## Accuracy

### Reference condition

- (1) Medium: water
- (2) Temperature: 20°C
- (3) Pressure: 0.1MPa
- (4) Front straight conduit:  $\geq 5DN$ , Rear straight conduit:  $\geq 2DN$

- ① X[m/s]: Flow rate
- ② Y[%]: Actual measured value deviation (mV)

# AE ELECTROMAGNETIC FLOW METER

## Type

### Type

#### Remote type

- ① Remote type flowmeter signal converter
- ② Remote type electromagnetic flowmeter sensor
- ③ Signal cable
- ④ User manual

### Compact type

#### Compact type

- ① Compact type electromagnetic flowmeter
- ② User manual

# AE ELECTROMAGNETIC FLOW METER

## Parameter

### Power supply

Power supply	100-240VAC, 50/60Hz, 22VDC—26VDC
Power consumption	Max 15VA
Signal cable	Apply only to remote type
Shielded cable	Signal section, wire: 0.5mm <sup>2</sup> Cu /AWG20

### Output

#### Current output

function	Measurement of volume and quality (in the case of constant density)	
Setting	scope	4-20mA
	Max	20mA
	Min	4mA
Internal voltage	24VDC	
loading	≤750Ω	

#### Pulse and frequency output

function	Set up Pulse and frequency output	
Pulse output	basis	Output pulse width: 0.25ms ~100ms Duty cycle: 50% (Pulse frequency ≥5Hz) Fmax ≤ 5000 cp/s
	setting	0.001L – 1m3
frequency	Max	Fmax ≤ 5000Hz
	setting	0-5000Hz
passive	U <sub>Outer</sub> ≤ 36VDC	

#### Status output

function	Output as alarm	
passive	U <sub>Outer</sub> ≤ 36VDC	

### Communications

Serial communications	RS-485
Output	Current (4-20 mA) , pulse , frequency , state switch
Function	ATC recognition, electrode contamination

# AE ELECTROMAGNETIC FLOW METER

## Measurement Accuracy

Max measuring error	Measurement value $\pm 0.5\%$ (Flow speed $> 1\text{m/s}$ ) ; Measurement value $\pm 0.5\% \pm 2\text{mm/s}$ (Flow speed $< 1\text{m/s}$ )
Repetitiveness	0.15%
Temperature sensor measuring range	$-20^{\circ}\text{C} \sim 120^{\circ}\text{C}$
Maximum measurement error	$\pm 0.1^{\circ}\text{C}$ (Within the measuring range of temperature sensor)

## Operating Environment

Temperature	
Environment	$-10^{\circ}\text{C} - 55^{\circ}\text{C}$ for Compact-Type Flowmeter $-10^{\circ}\text{C} - 60^{\circ}\text{C}$ for Converter of Remote-Type Flowmeter $-10^{\circ}\text{C} - 55^{\circ}\text{C}$ for Converter of Remote-Type Flowmeter
Storage	$-40^{\circ}\text{C} - 65^{\circ}\text{C}$

## Electric Conductivity

Water	Min. $20\mu\text{S/cm}$ (Actual electric conductivity should be greater than $50\mu\text{S/cm}$ )
Other	Min. $5\mu\text{S/cm}$ (Actual electric conductivity should be greater than $50\mu\text{S/cm}$ )

## Material

Sensor housing	Carbon steel
Converter	Standard die cast aluminum

## Display User Interface

Graphic display	Monochrome LCD, white backlight; Size: $128 \times 64$ pixels
Display function	2 measurement value pictures (measurements, condition, etc)
Language	Chinese/ English
Unit	You can configure the menu to select the unit Refer to "6.5 Configuration details" --- "flow units 1-1"
Operating unit	4 Mechanical keys (Compact Type) or 4 touch key (Remote Type)

## Measuring System

Measuring principle	Faraday's law of electromagnetic induction
Function	Real-time flow rate, flow velocity, mass flow (when the density is constant), real-time measurement and flow accumulation
Module configuration	Measurement system is made up of signal converter and measurement sensor

## AE ELECTROMAGNETIC FLOW METER

Converter	
Compact Type	IP65
Remote Type	IP65(IP68 optional)
Measurement sensor	
Nominal Diameter	DN15-DN1000
Flange	In line with GB/T9119-2000 standard carbon steel (Optional stainless steel flanges), other standard flange can be customized
Pressure rating (High pressure can be customized)	DN6 - DN80, PN<4.0MPa DN100 - DN150, PN<1.6MPa DN200 – DN1000, PN<1.0MPa DN1200 – DN2000, PN<0.6MPa
Lining Material	Chloroprene rubber (CR), Polytetrafluoroethylene (PTFE/F4), Fluorinated ethylene propylene (FEP/F46), Teflon(PFA)
Electrode Material	316L Stainless Steel, Hastelloy C, Hastelloy B, Ti, Ta, Pt
	IP68 IP65
Medium temperature	-25 – 180°C -10 – 80°C
Buried depth	Less than 5 meters (only IP68 protection of remote type sensor)
Immersion depth	Less than 3 meters (only IP68 protection of remote type sensor)
Sensor cable	Only for remote type, the standard 10m cable; other cables suggest custom no longer than

# AE ELECTROMAGNETIC FLOW METER

## Parameter

Electrode selection	
Material	Corrosion Resistance
Molybdenum-containing stainless steel (0Cr18N12Mo2Ti)	Applicable: Domestic/industrial water, sewage, weak acid and alkali saline as well as concentrated nitric acid at room temperature. Not Applicable : Hydrofluoric acid, hydrochloric acid, chlorine, bromine, iodine and other media.
Hastelloy B	Applicable: Non-oxidizing acid, such as hydrochloric acid and hydrofluoric acid of certain concentration and other alkali liquor with a concentration of no less than 70% sodium hydroxide Not Applicable: Nitric acid and other oxidizing acids
Hastelloy C	Applicable: corrosion by oxidizing acids such as Nitric acid, acid mixtures and sulfuric acid and environmental corrosion by oxidation resistant salt or that contains other oxidants. For example, Hypochlorite solution higher than room temperature is strongly corrosion resistant to sea water. Not Applicable: Reducing acid and chloride such as hydrochloric acid
Ti	Applicable: chloride, hypochlorite, sea water, oxidizing acid. Not applicable: reducing acid such as hydrochloric acid, sulphuric acid
Ta	Applicable: most acids like concentrated hydrochloric acid, nitric acid and sulfuric acid including hydrochloric acid and nitric acid at the boiling point as well as sulfuric acid under 175 °C. Not applicable: alkali, hydrofluoric acid and smoke sulfuric acid.
Pt	Various acids, bases and salts, excluding aqua regia.

Lining Selection					
Lining material	Symbol	Properties	Max .operating temperature	Applicable medium	Nominal diameter
Neoprene	CR	Average abrasiveness, good for acidic, alkali, and salts solutions.	<60°C	Water, sea water, industrial water	≥DN50
Polyurethane	PU	With very good antiabrasiveness; No good for acid, alkali solutions	<60°C	Slury like mine slury, paper slurry	DN25~500
Teflon	PTFE	Stable chemical property, proof against the corrosion of boiling hydrochloric acid, sulphuric acid, nitric acid and aqua regia, concentrated alkali	<100°C	Strong corrosive acid, alkali solution	≥DN10
FEP(F46)	FEP(F46)	Same chemical properties as F4, but with better tensile strength and pressure resistance.	<120°C	Corrosive acidic, alkali, and salts solutions	DN10~200
PFA	PFA	Same chemical properties as F46, but with better tensile strength and pressure resistance.	<120°C (Compact) <180°C (Remote)	Corrosive acidic, alkali, and salts solutions	DN10~300

# AE ELECTROMAGNETIC FLOW METER

## Parameter

### ★ Process connection

Clamp on (Stainless steel)

Flange (Stainless steel)

Flange (Carbon steel)

**Note : Flange can be customized, and the pressure need to be considerate**

DN6 - DN80, PN<4.0MPa

DN100 - DN150, PN<1.6MPa

DN200 – DN1000, PN<1.0MPa

DN1200 – DN2000, PN<0.6MPa

### ★ Location

Do not install the electromagnetic flowmeter on a free-vibrating pipe without any support. Instead, a mounting base shall be used to secure the measuring tube. When the electromagnetic flowmeter is required to be installed underground, the pipes at both inlet and outlet ends shall be provided with support items, and a metal protection plate shall be installed above the flowmeter.

# AE ELECTROMAGNETIC FLOW METER

## (1) No bubbles shall be observed in the pipes.

Pipes shall be designed to prevent the air bubbles in the fluids from accumulating the measurement pipe of a sensor. If a valve exists near the flowmeter, try to mount the flowmeter on the valve's upstream side for preventing a decrease of pressure inside the pipe possibly, consequently avoiding the possibility of air bubbles.

(1) The electromagnetic flowmeter cannot be installed on the suction side of the pump

ensure that no gas can be separated from the liquid.

## (2) Flow direction

The flowmeter can be set to automatically detect the positive and negative flow direction. The flow direction arrow on the sensor casing indicates the positive flow direction specified by the manufacturer. Generally, when installing the meter, the user shall make the flow arrow consistent with the on-site process flow.

The pipe is routed to the highest point  
(Bubble accumulation in the measuring tube is likely to cause produce measurement errors!)  
It is easy to cause a non-full tube

## (3) The electromagnetic flowmeter cannot be installed on the suction side of the pump

## (4) For long pipelines, control valves are generally installed on the downstream of the electromagnetic flowmeter.

## (5) For pipes with open discharges, the electromagnetic flowmeter shall be installed at the bottom section (lower part of the pipe).

## (6) For places where fall head of pipes is over 5 m, the air valve shall be installed on the downstream of the electromagnetic flowmeter

# AE ELECTROMAGNETIC FLOW METER

(7) Measurement error caused by incidental gas and damage of lining caused by vacuum shall be avoided

## (8) Grounding

As the voltage of induced signal of electromagnetic flowmeter is small, it's more prone to be affected by noises or other electromagnetic signals. This is why the electromagnetic flowmeter needs to be grounded in many occasions. This functions to form an internal space for shielding external interference through the grounding of flowmeter casing, thereby improving measurement accuracy.

## Wiring

### Remote

L, N:	100-240VAC power supply 24V power supply
ALM1, ALM2	Relay out
POUT, PCOM	Pulse/Frequency output
485A, 485B:	RS485 communication
IOUT, ICOM:	4-20mA output
EXT1, EXT2	Excitation signal
SIG1, SIG2, SGND	Electrode signal
DS1, DS2	Electrode shield

### Compact type

L, N:	100-240VAC power supply 24V power supply
485A, 485B:	RS485 communication
IOUT, ICOM:	4-20mA output connection
POUT, PCOM:	Pulse/Frequency/Relay out
CCOM:	RS485 communication ground
	Converter instrument grounding protection
